

ROCK

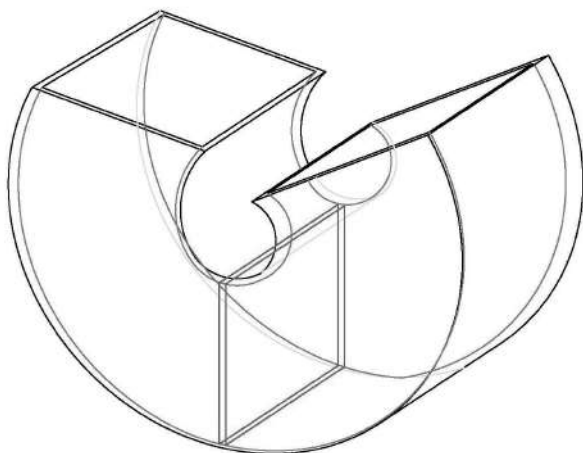

Rock gives a new identity to a rarely addressed house element: the bin.

Rock is the first recycling desk-bin in the world, designed with two internal compartments to sort recyclable materials. Rock makes it easier and quicker to recycle in all the rooms of the house, avoiding the waste of recyclable materials in rooms such as study, bedroom and all the living areas.

Rock is a rocking bin and cannot be knocked over. When hit, the shell swings back to its neutral position keeping all its content inside.

Rock is also a decorative element for the house where to host clean materials that will be given a new life.

Dimensions	400(l) x 160(w) x 330(h) mm	
Weight	0.5Kg	
Material	Recycled PELD	
Colours	<input checked="" type="checkbox"/> Black	<input type="checkbox"/> White

Maison et Objet, Paris

Title of piece: **Rock**
Artist: **Federica Cammarota**

Rock is a round shell-shaped recycling bin that challenges the traditional idea of a waste bin. It is designed to replace traditional one-compartment bins in areas such as the bedroom, study, living room, TV lounge. The distinctive shape of Rock addresses the need for multi-compartmented bins throughout the house, making it easier and quicker to divide materials. Due to its rounded shape, Rock cannot be knocked over: when hit, the shell swings back to its neutral position and keeps the content inside. Rock is a designer bin that no longer stands for waste and becomes a household decorative element, where to temporary host clean recyclable materials that will be given a new life.
